Abstract:

Having been put through its paces in the field of industry, quality management has now spread to the fields of accountancy and administration. The follow-up of this politics takes place by a company that gives certification. We will be looking particularly at the case of the first French company of international repute to receive quality certification in the field of accountancy. This was in 2001. This approach indubitably contributes a powerful method of clarifying and informing, which gives individuals a new outlook and gives more meaning to their activity.
